THE CALCULATION OF RIDGE WAVE GUIDES.
[1962] 12p. 4 refs.
Order from SLA \$1.60

63-10248

Trans. of Archiv der Elektrischen Übertragung (West Germany) 1955, v. 9, no. 4, p. 157-161.

DESCRIPTORS: *Waveguides, Electrical properties, Design.

This paper calculates the cutoff frequency and characteristic impedance of cross sections of ridge wave guides for which the known formulas are no longer applicable, and gives thus design data for ridge wave guides of any desired cross section. For completeness the known calculations are also shown in a co-ordinated form. Numerical evaluations show that by the use of suitable cross sections the cutoff frequency and characteristic impedance can be varied within wide limits. (Engineering--Electronic, TT, v. 9, no. 10)

<u>Unger, Leopold.</u> THE USE OF RADIOACTIVE ISOTOPE FOR FLOW INVESTIGATIONS IN GLASS MELTING TROUGHS (Anwendung Radioaktiver Isotope zu Strömungsuntersu- chungen in Glasschmelzwannen). Lecture at Glastechnical Convention (no. 34) Berlin, 4 May 60. [1963] [17]p. (foreign text included) 5 refs. Order from SLA \$1.60 Trans. of Glastechnische Ber[ichte] (West Germany) 1960, v. 33, no. 11, p. 416-421. DESCRIPTORS: *Glass, *Radioactive isotopes, Melting, Fluid flow, Test equipment, Industrial equipment. Flow investigations on glass melting troughs with radio- active substances are described. The advantages of this procedure consist in that the demonstration of the radioactive material is very sensitive, the measure- (Materials--Ceramics, TT, v. 10, no. 5) (over)	63-14066 I. A calorimeter was developed which permits to deter-
mine the heat content of the glass to be processed,
and meets the more rugged operational conditions
without having to incur an important loss in precision.
Measurements were made with the calorimeter at
various types of glass and various machines. It was
found that the escape of heat in the preliminary shape
is almost the same with all types of machines,
whereas the release of heat in the finished shape is
